

Computer vision

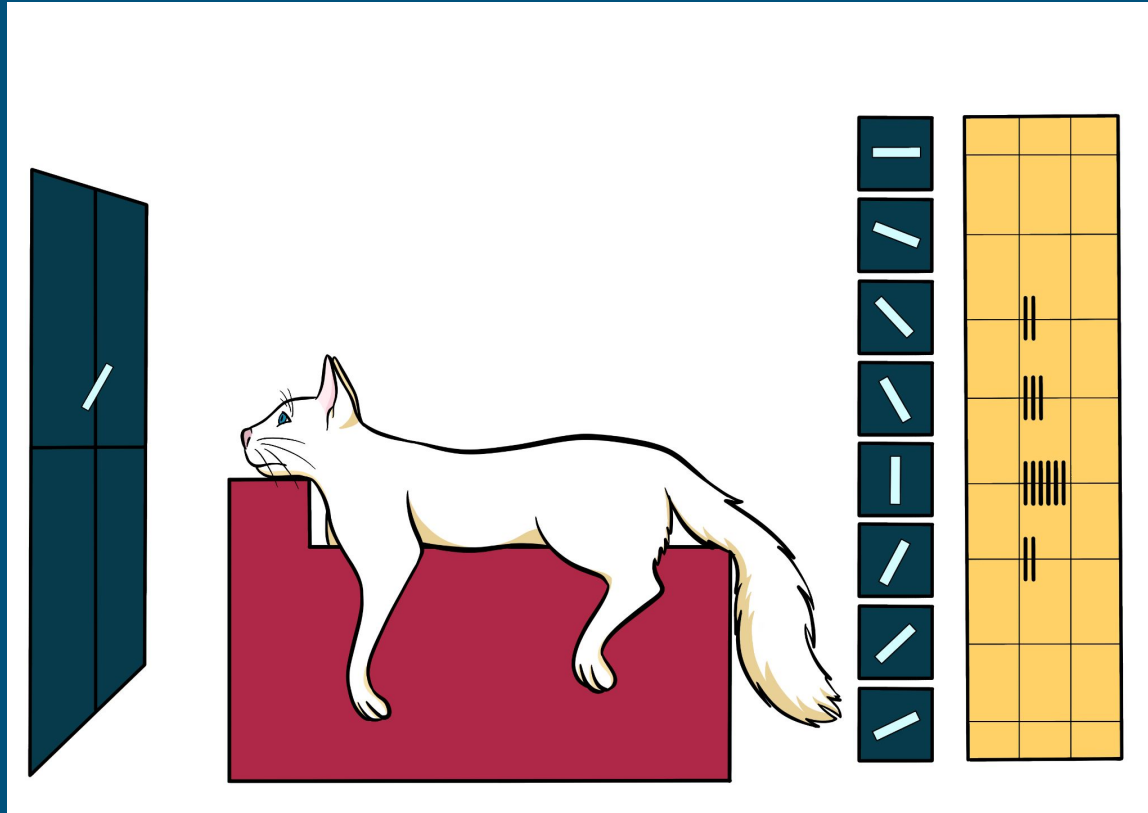

How do we see?

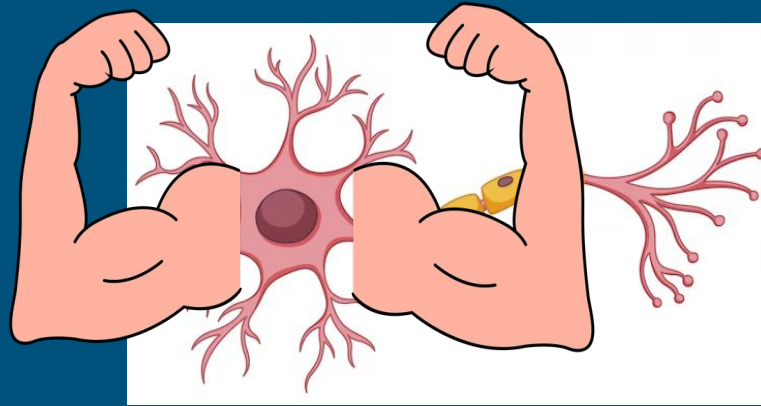

Neuron activation

Hubel and Wiesel experiment

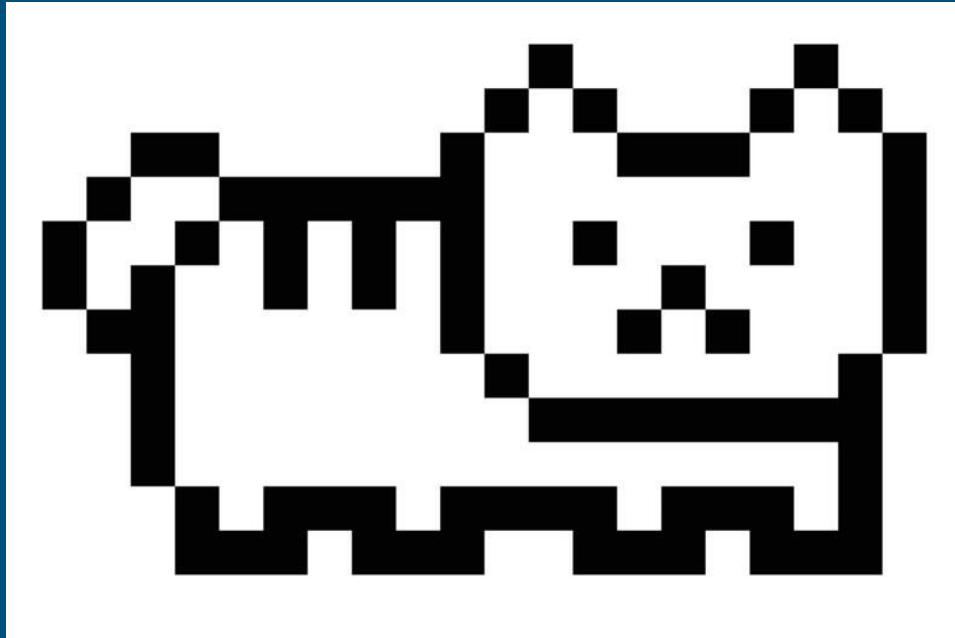

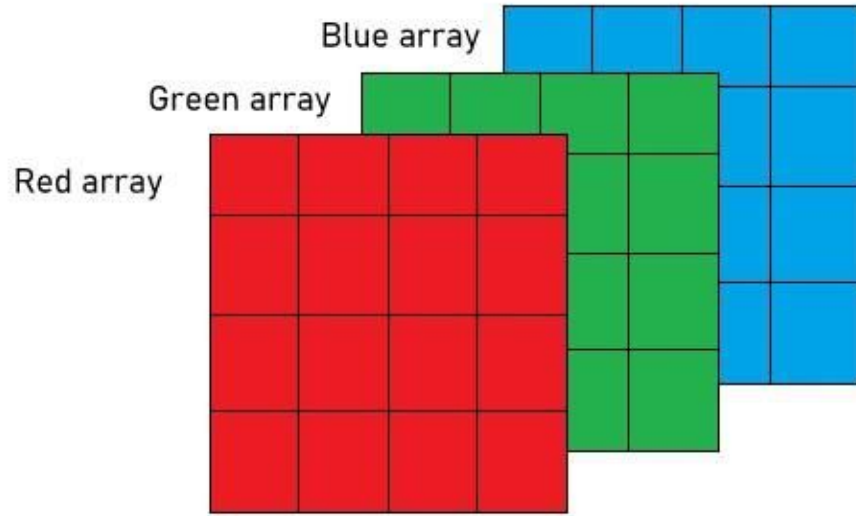

We have high level visual neurons capable of
processing complex information

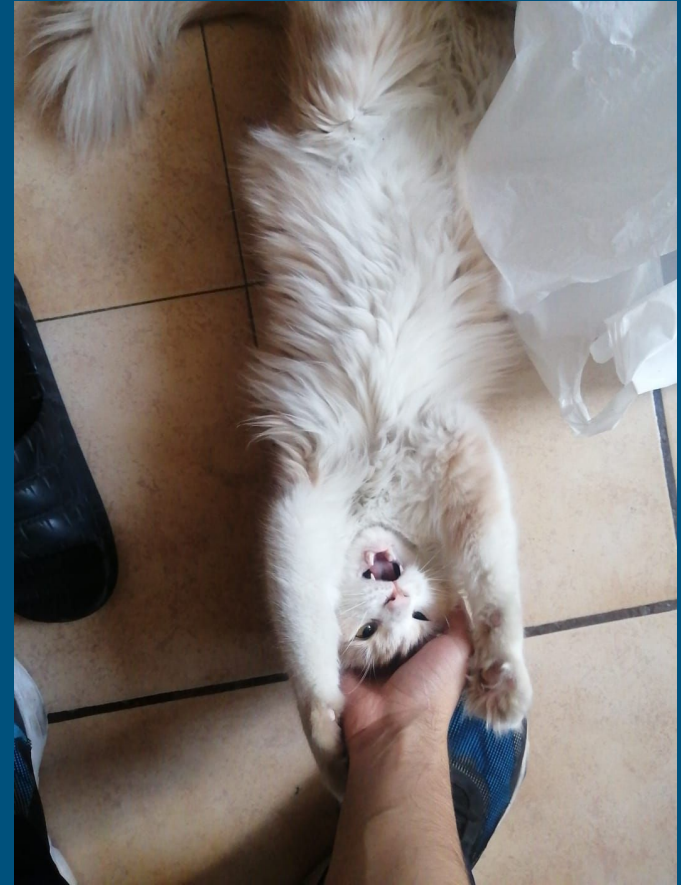

Now, for a
computer....

Every image is an array (matrix) of values

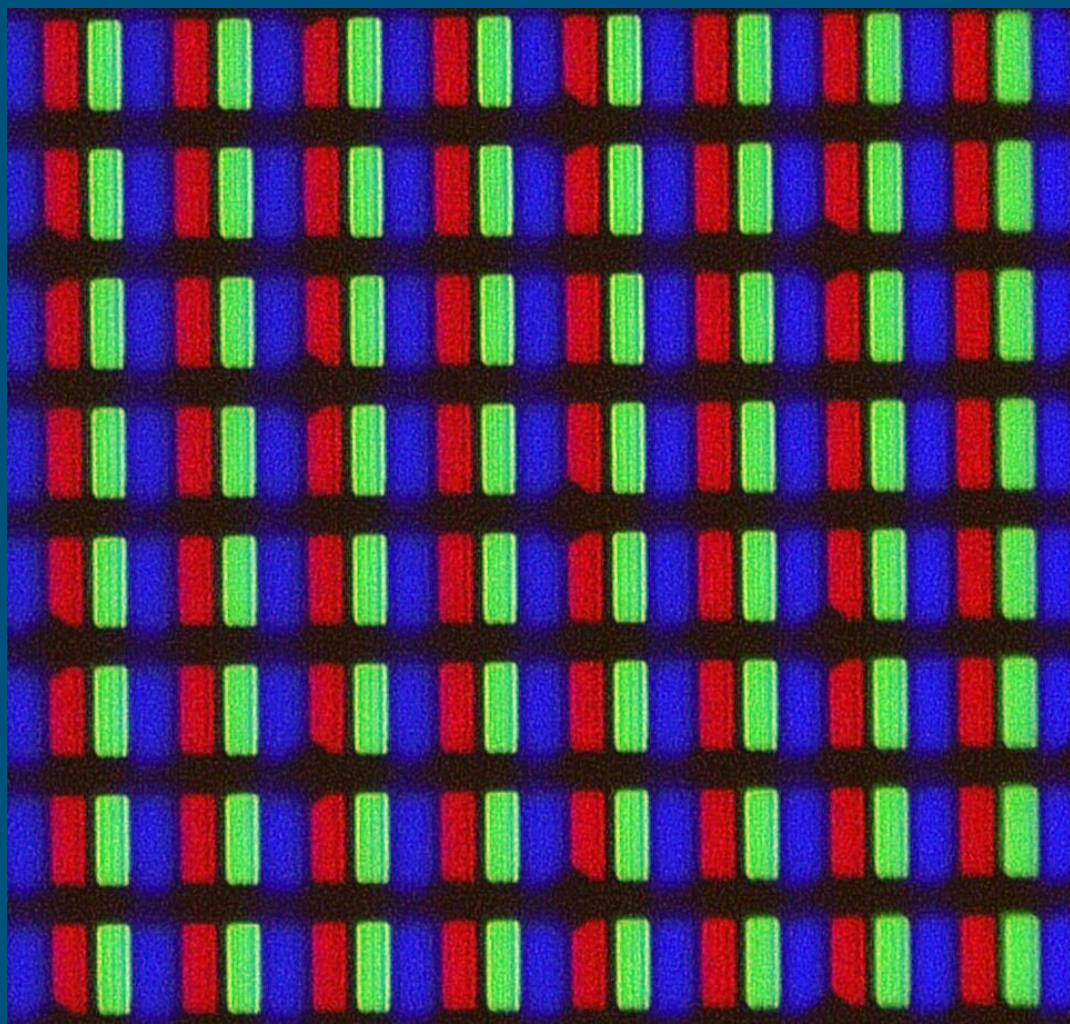

Arrays stacked over each other
to form a Digital Image.

Coding time

Image processing

Image Filtering

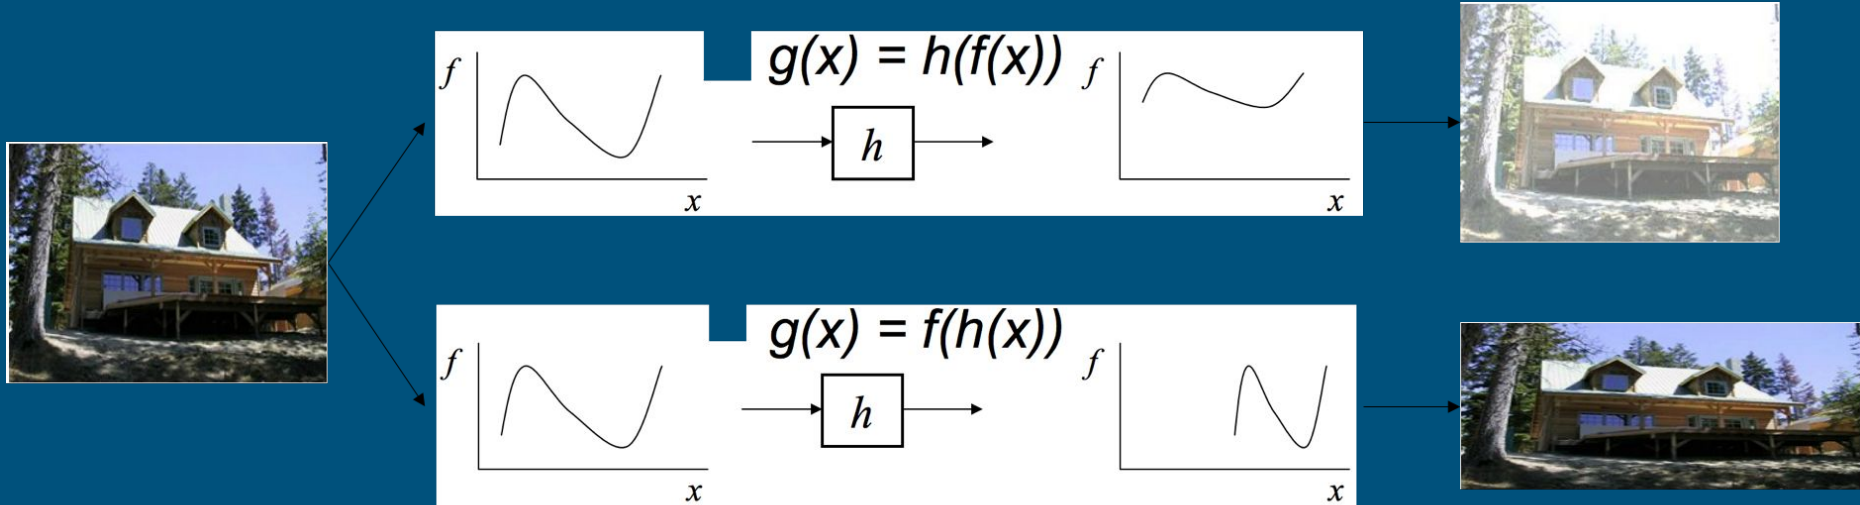

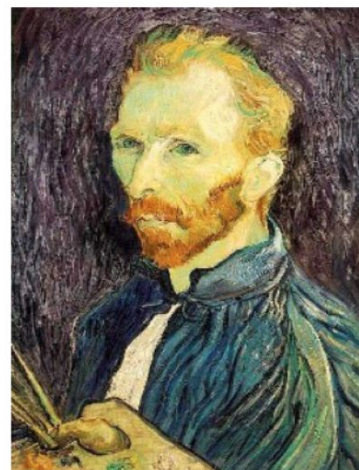

Image Warping

De-noising

Salt and pepper noise

Super-resolution

In-painting

Filtering (and kernels)

Convolutions!
